PROVE IT © 2020 Dictionary.com, LLC.1st Capacity for Work or Powerful Activity Force Power. 2. Exertion of power or power: I have this project which requires a lot of time and energy. 3. The vitality and intensity of expressions strong expressions; a speech that comes with energy and emotion. 4. Usable heat or power. 5. A source of usable power: oil or coal. 6. In physics, the ability to do the work; a system that is reduced when the system operates on another system by an amount equal to the work carried out by potential energy. Energy forms include heat, light, sound, chemical energy. Energy and work are measured in the same units - foot-pounds, joules, ergs, or another, depending on the measurement system used. When a force acts on a body, the work performed (and the energy used) is the product of the force and the distance over which it is exerted. First recorded in 1599, from Central French energy, from late Latin energia, which was from Greek energeia, efficiency, activity, operation came from energos, active, working from one-, that + ergon, work. Used by Aristotle with a sense of expressiveness; the broader meaning of power was first recorded in English in 1665. To energize; that is, wake to activity is from 1753; energetic of people, institutions, etc., is from 1796. The term energy crisis was first recorded in 1970. Get your Erg on! The Greek Root lurks behind many English words by ROB KYFFSpecial to The Courant Feel the erg! The Greek root ergon (work, activity) clearly romps in many English words, including energy, ergonomics and synergy. But sometimes it hides behind a disguise. It lurks incognito, for example, in words as diverse as allergies, surgeon and even. Allergy, invented in 1910 by wonderfully named Austrian pediatrician Clemens E. von Pirquet, is a mixture of the Greek allos (other, different, strange) and ergonomics (activity). So an allergy is a body activity in response to a foreign substance. Achool Surgery stems from the ancient Greek cheirourgos., a mixture of the Greek cheir (hand) and ergonomics (work). So surgery is work done by hand. The Greek cheir also shows up in the word of another medical specialist, chiropractor, a combination of cheir and practice. Crack it one more time, Doc! Ergonomic also surfaces like urg in dramaturgy (the studio and the art of dramatic composition). Dramaturgy comes from the Greek dramaturgia, from dramatos (of drama) and ergos (worker). If you've ever seen the first read of a screenplay by a professional theater company, you know that dramaturge works hard to coach actors on their interpretations of the text. Erg dons its org mask in organ, derived from the ancient Greek organon, which comes from erg and means that as one works. So we use the organ to denote a keyboard instrument that works to produce music, a device used as a tool, such as a body of government, and a part of the body that performs certain functions. Speaking of body parts, the derives from the Greek word orgia, which referred to secret rituals that included dancing, singing and drinking. Despite all the fun involved, Orgia actually comes from the ergon, presumably because these festivities were considered a form of work that anyone who has been to an can witness. When the entered English during the 1660s, it referred to any kind of licentious festivities, but it usually has a spicier meaning today. Maybe my favorite ergonomic word is zymurgy. last word, listed in many dictionaries, zymurgy denotes the branch of chemistry that deals with winemaking and brewing. It is a combination of the Greek zyme (a boar, such as yeast) and ergonomics. So zymurgy is literally yeast at work producing fermentation. And that's the last word on erg. DefinitionsSynonymsSentencesQuotesSpanish The centimeter-gram-second unit of energy or work corresponding to the work performed by a force of a duvet trades over a distance of one centimeter. noun The basic energy unit or work of the CGS system, corresponding to the amount of work done by a force of a duvet acting through a distance of one centimeter (10<sup>-7</sup> joule) noun An extensive area of the desert covered with changing dunes. noun A large desert area with deep rolling dunes. noun the device of energy or work in centimeter-gram-second system, corresponding to the force of a duvet over a distance of one centimeter.
